

Machines for the Production of Cotton Balls for Cosmetic Use

Overview

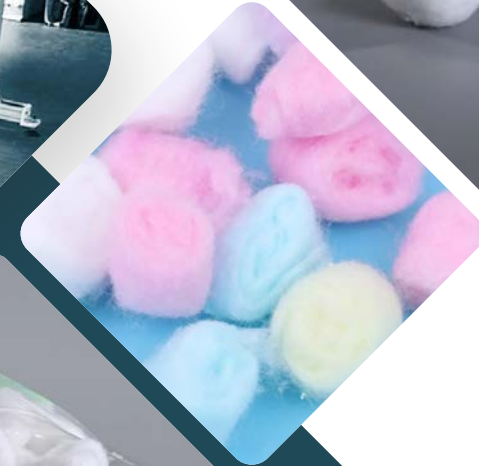

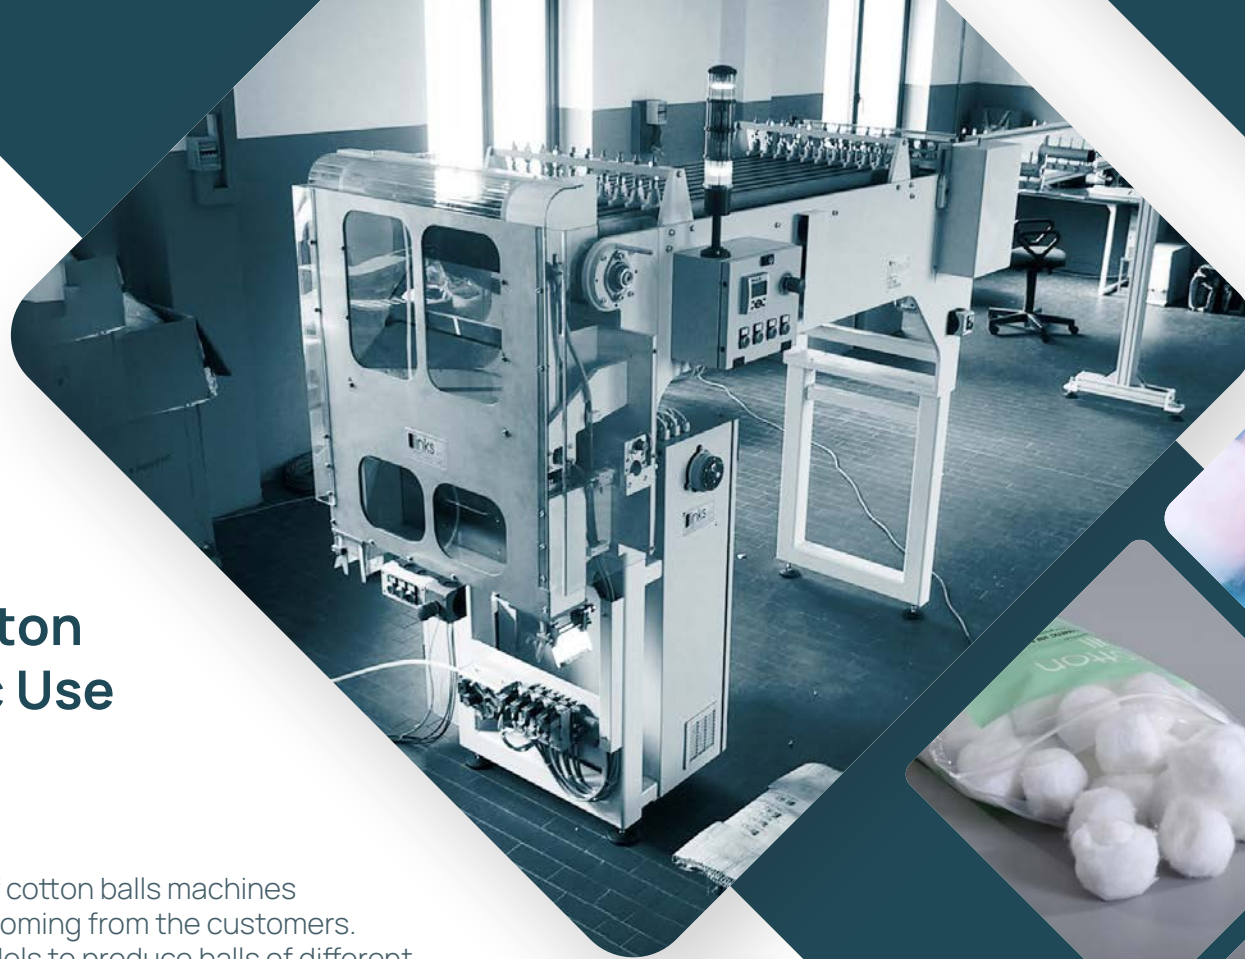

LINKS S.r.l. can offer a wide range of cotton balls machines according to any specific request coming from the customers. Our production range includes models to produce balls of different weight and dimension.

All our machines are fed by cans of cotton sliver and can also be directly connected with cards.

The main difference from PM5 and PN10 machines is the number of cotton slivers that gives the production capacity of the machines.

We recently realized a new economic small machine (PE4 model) for small volume production.

The PM5 and PN10 machines can be equipped with automatic packing device.

PE4 MACHINE

Range of production:
Balls from 0,3 to 2 gr.

Production:
About 400 balls per minute

Feeding:
4 cotton slivers

Operators:
One

PM5 MACHINE

Range of production:
Balls from 0,3 to 2 gr.

Production:
More than 1000 balls per minute

Feeding:
5 cotton slivers

Operators:
One/Two

PM5+SPCB/2 MACHINE

Range of production:
Balls from 0,3 to 2 gr.

Production:
More than 1000 balls per minute

Feeding:
5 cotton slivers

Production SPCB/2:
12 bags per minute

Operators:
One

PN10 MACHINE

Range of production:
Balls from 0,3 to 2 gr.

Production:
More than 2500 balls per minute

Feeding:
10 cotton slivers

Operators:
One/two
depending by the number
of balls per bag

PN10+SPCB MACHINE

Range of production:
Balls from 0,3 to 2 gr.

Production:
Up to 2500 balls per minute

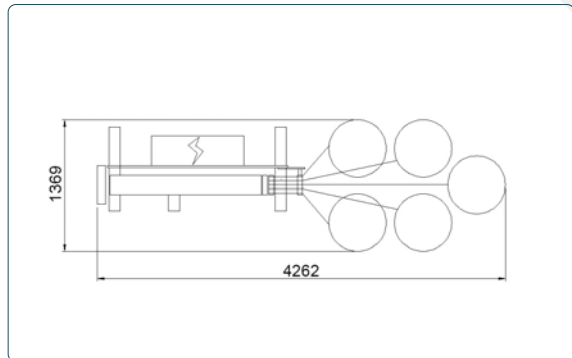

Feeding:
10 cotton slivers

Production SPCB/2:
24 bags per minute

Operators:
One
