

A large industrial machine used for producing spunlace cosmetic products, with multiple vertical rollers and a conveyor belt.

## “No waste” Machines for Spunlace Cosmetic Products

### Overview

LINKS S.r.l. can offer a new generation of machines for a new generation of cosmetic spunlace products. Based on the concept of the double cutting (longitudinal and transversal), we can produce several types of products such as rectangular/square pads, perforated rectangular pads as well as perforated spunlace rolls.

The main difference from the conventional “Punched pads” is that we have 90 degrees angles on the pads and No Waste (skeleton) during the production process.

In some case the waste can be from 3 to 5% if the customer wants to trim the material. In any case far away from the 35% of a standard round pads production.

### RC4+ASA+S1 MACHINE

**Range of production:**  
Stacked pads 110x90 mm - 75x75 mm -  
60x50 mm packed in PE bags

**Production:**  
24 bags/min of 50 pads 110x90 mm.

### RC1-LF+SPRP MACHINE

**Range of production:**  
Pads 100x80 mm in loose form in PE  
bags of 200 units  
Pads 50x50 mm in loose form in PE bags  
of 500 units

**Production:**  
12 bags/min of 200 pads 100x80 mm.

### Z/API-6S+ASA+S1 MACHINE

**Range of production:**  
Perforated pads 100x90 mm - 75x75 mm  
- 60x50 mm packed in PE bags

**Production:**  
36-38 bags/min of 50 pads 60x50 mm.

Technical Layout

### Product Highlights / Options

- ✓ Several pads dimensions according to the material width.
- ✓ Material widths from 250 to 630 mm.
- ✓ Several perforation steps available.
- ✓ Embossing on pads surface available.
- ✓ Stitching on the pad edges.
